

Maha Aldib

52-year old Maha Aldib has been an educator for more than 30 years and recognizes the importance of computer education. Maha eagerly joined the Women in Technology (WIT) program after years of computer training to further her education. "IT training is essential because develops professional performance and enhances my confidence, which will open many doors in the workplace."

Maha studied law and sociology at a university yet, due to family circumstances, was unable to complete her undergraduate degree. "In my current position, it is very difficult to obtain a promotion because I do not have a bachelor's degree," she explains. "I am hopeful that the WIT program will open new doors for professional opportunities."

Her two sons cheer her on and help her with her curriculum. Maha's pride shows as she boasts, "My eldest son has a bachelor's degree in accounting. He started his own office and is very successful. My youngest son studied computer science management and now works as an officer in a station for fuel distribution." Maha continues, "If I had a daughter, I would encourage her to follow in my footsteps and go even further than I did."

Now Maha encourages other women to take the WIT class. "I strongly support the WIT training, and I encourage all women to get involved in IT and professional skills classes. I plan to work with the program and facilitate expansion to many other Lebanese areas, especially the places that desperately need this program." She thoughtfully adds.
